

Internet Outage Readiness Test

A simple assessment that helps readers determine whether losing their primary internet connection would become a minor inconvenience or a major business disruption.

Check all that apply:

-  We have a secondary internet connection ☐
-  Failover happens automatically ☐
-  Our backup connection uses a different provider or network ☐
-  We have verified physical path diversity where possible ☐
-  Our backup connection has enough capacity for critical operations ☐
-  We know which applications should receive priority during failover ☐
-  Phones can continue operating during an internet outage ☐
-  Critical cloud applications remain accessible ☐
-  Our network automatically returns to the primary connection after recovery ☐
-  We periodically test our failover configuration ☐

Your Results

8–10 Checks

Your organization has a strong connectivity continuity strategy. Continue testing the environment and reviewing capacity as your technology needs change.

5–7 Checks

You have some redundancy in place, but gaps could still create disruption during an extended outage.

0–4 Checks

Your primary internet connection may represent a significant single point of failure. Consider evaluating backup connectivity and automatic failover options.
